Academic Project

M.tech Project

Title	Cluster Computing Based Video Surveillance: SmartHub
Technology	**Implemented ROCK Cluster** **MATLAB** **Gangilia Performance Monitoring Tool**
Description	- Design distributed system for video surveillance that detect missing object like CPU, Keyboard, Mouse etc. - This system mainly relies on dynamic workload assignment (DWA) algorithm. These algorithms mainly focus on distribution of workload between systems based on performance of that system. The performance is monitored by Gangilia Performance Monitoring Tool - According system performance of the system , DWA algorithm classify node/system into highly/lightly loaded system. Video surveillance application run on lightly loaded system which detect missing object and generate alert.

B.E Project

Title	An Image Retrieval System Using Histogram Values And Texture Descriptor Analysis
Technology	**JAVA**
Description	- The objective of the project , retrieve the images using histogram values and texture descriptor analysis. - Extraction of color feature with the help of histogram values and texture features are extracted with the help of entropy, local range and standard deviation of image. - When a query image is submitted, its color and texture value is compared with the color and texture value of different images stored in database. The images having matching value compared to query image are retrieved from database are displayed on GUI as result.

S.E IInd SEM Project

Title	Income Tax Management
Technology	**C++**
Description	The aim of the project is calculation of tax on customer's annual income by checking user's inputs like age, gender, investment etc. File handling is used to maintain records of customers.

S.E I^{st} SEM Project

Title	Geometric Calculator
Technology	**C**
Description	This project provides the geometric calculator that provides facility to calculate area, volume, circumference of various shape efficiently and easily.
